

External reader app "tolino" can no longer be used

[In PDF exportieren](#)

With the update to version 5.0 (for iOS) and version 4.10.2 (for Android) of the external reader app "tolino", media from the online library can no longer be used in the toline app.

Please use the eLibrary app for online lending media or another reader app such as "PocketBook", if you have updated to version 5.0 (for iOS) or to version 4.10.2 (for Android).

The eBook readers from toline will continue to support Adobe DRM as well as the new copy protection method LCP/CARE from Onleihe.

Tolino decided to switch off the Adobe copy protection, as the copy protection system led increasingly to technical errors and is no longer needed within the toline ecosystem.

According to the iOS app, which was published in March 2020, this will also affect the toline Android app starting October 2020.

The eBooks that were purchased from toline bookstores use a different copy protection system in the toline app and are not affected by this.
